

## **ADDENDUM**

---

### **SALTON SEA AIR QUALITY MITIGATION PROGRAM**

This document is an Addendum to the Salton Sea Air Quality Mitigation Program (SS AQMP) prepared by the Imperial Irrigation District (IID) in July 2016. The SS AQMP includes 1) an Annual Emissions Estimate to identify areas of exposed playa for proactive dust control, 2) an Annual Proactive Dust Control Plan with recommendations and design for site-specific dust control measures, and 3) implementation of dust control measures to prevent PM10 dust source areas from becoming significant sources of dust emissions. Over the last eight years, the overall approach for data collection and analysis associated with the SS AQMP has been continually refined and improved.

The purpose of this Addendum is to define the reporting timelines based on the refined workflows developed since 2016. Annual reporting includes the following 1) a technical memorandum documenting playa exposure for the preceding calendar year by March 31, annually, and 2) the Annual Emissions Estimate and the Annual Proactive Dust Control Plan by June 1, annually. Final documents will continue to be posted to the IID website.
